

PK DEFICIENCY TEST REPORT

Provided Information:		Case:	CAT134098
Name:	HYPNOTIC'BENGAL SAPHYR	Date Received:	02-Aug-2021
Registration:	on hold	Report Issue Date:	13-Aug-2021
		Report ID:	1874-8320-9365-2179
Verify report at www.vgl.ucdavis.edu/verify			
DOB: 04/23/2021 Sex: Female Breed: Bengal Microchip: 250269100072737 Color: Brown tabby motifs spotted/rosettes			
<i>Certified By: Patricia Butelet License: 22822 Email: chocog@wanadoo.fr Phone: 04 70 03 22 65 City: Neris Les Bains Country: FR Sample Date: 07/20/2021</i>			
Sire:	JUSTWILD KARMA	Dam:	MOULIN ROUGE MISTINGUETT
Reg:	LOOF 2020CE.477	Reg:	LOOF 2016.15873
Microchip:		Microchip:	

PYRUVATE KINASE DEFICIENCY RESULT

N/K

Interpretation

- N/N No copies of PK deficiency, cat is normal
- N/K 1 copy of PK deficiency, cat is normal but is a carrier
- K/K 2 copies of PK deficiency, cat is or will be affected. Severity of symptoms cannot be predicted*

Additional Information

If testing for a disease or a disorder was performed and results indicate the animal is affected or at risk, we recommend contacting your veterinarian for further clinical evaluation and for additional information on disease and management.

For more detailed information on PK Deficiency test results, please visit our website at:
www.vgl.ucdavis.edu/services/pkdeficiency.php

Erythrocyte Pyruvate Kinase Deficiency (PK deficiency) is an inherited, autosomal recessive, hemolytic anemia. Breedings between carriers will be expected to produce 25% affected kittens. Go to our website for a list of breeds at risk of PK deficiency due to a significant frequency of the mutation.

For terms and conditions of testing, please see www.vgl.ucdavis.edu/about/terms-and-conditions

Results are determined using PCR-based methods. The results relate only to the sample tested as identified by the submitter (for example, identity and/or breed).

Report authorized by Dr. Rebecca Bellone, VGL Director
